📍 Dundee, Scotland

Profile

Third-year Computer Science (UX + Design) student at the University of Dundee, seeking a year-in-industry placement to apply technical, creative and organisational skills in a professional environment. Interested in UX, product and project management, with experience in software development, web technologies, collaborative projects and student leadership. Founder and Co-President of a 60+ member Women in STEM Society, where I manage a committee, coordinate regular activities, develop external relationships and lead future outreach initiatives. This is something I am very passionate about and would love to continue this someday even after University.

EXPERIENCE

CO -PRESIDENT & FOUNDER — WOMEN IN STEM SOCIETY

2026 - Present

University of Dundee

- Founded and lead a Women in STEM Society that has grown to 60+ members, creating opportunities for students to connect, collaborate and engage with STEM.
- Established and manage the society committee, coordinating responsibilities and supporting the delivery of regular activities and events.
- Represent the society at industry networking events, building connections with professionals and organisations and creating opportunities for members to engage with industry.
- Developing plans for STEM outreach sessions in schools, aiming to encourage younger girls to explore STEM subjects and potential careers.
- Created the society's visual identity, logo and manage much of its Instagram content to promote activities and engage members.

SALES CONSULTANT — THE BODY SHOP

May 2026 - Present

- Provide customer-focused service by identifying customer needs and recommending appropriate products and solutions.
- Communicate confidently with a wide range of customers and co-workers and adapt communication to different needs and situations.
- Worked with the store team to support the Freshers' Stall, helping represent the brand and engage with students.

EDUCATION

University of Dundee

Communication Presentations · Customer communication · Networking · Social media content · Team collaboration

PROJECTS

INDAGO — MOTIVATIONAL SELF-CARE APP

University of Dundee | User Interface Design

- Designed the user interface for Indago, a motivational self-care app aimed at helping students improve time management and maintain positive routines.
- Applied UX and accessibility principles when designing the interface, considering the needs and challenges of the target student audience.
- Used Figma to create wireframes and prototypes, developing the app's interface and user flows.
- Considered how the design could provide a clear and accessible experience for students managing competing academic and personal responsibilities.
- Pitched the app concept and design to a lecturer, presenting the rationale behind the product idea and interface decisions.

Skills Used: Figma · User Research · UX Design · UI Design · Wireframing · Prototyping · Accessibility

EXCITARE — WEB APPLICATION

University Project | 2025–26

- Developed a full-stack web application designed around alarm management, reviews and integration with users' Google Calendars.
- Contributed to the frontend experience, including user login, alarm browsing, alarm selection, reviews, settings and accessibility features.
- Conducted frontend usability testing using task-based scenarios covering core user journeys, identifying and resolving issues including navigation and UI consistency.
- Implemented communication between the frontend and a Flask API, using SQLAlchemy and SQLite to manage users, alarms and reviews.
- Developed and integrated Google Calendar functionality to allow users to connect their calendars and retrieve upcoming events.
- Worked with authentication, user roles and administrative functionality to support different user experiences.

Skills Used: UX Testing · Accessibility · UI Development · Flask · SQLAlchemy · SQLite · API Integration

WAREHOUSE MANAGEMENT SYSTEM

University Project | 2025–26

- Developed a database-driven warehouse management system for managing products, suppliers and stock levels using SQLite.
- Implemented an AI-powered robot navigation module combining A* search and a Deep Q-Network (DQN)* to optimise movement through a grid-based warehouse.
- Combined database management, algorithmic problem-solving and AI techniques within a single application.
